## **Detailed Description**

With every major release of **Revit**, older files need to be upgraded before use in the latest version. This add-in takes care of the tedious task of upgrading files.

The Batch File Upgrader will upgrade:

- Revit Projects (.rvt)
- Revit Families (.rfa)

• Revit Templates (.rte)

It does so by scanning all relevant files in the selected folder. You may also limit the search and upgrade process to folders containing a specified string value.

| Batch Upgrader                   | × |
|----------------------------------|---|
| Specify folder and upgrade files |   |
| Folder Names Containing:         |   |
| Include Subfolders               | _ |
