

# WATERMARK

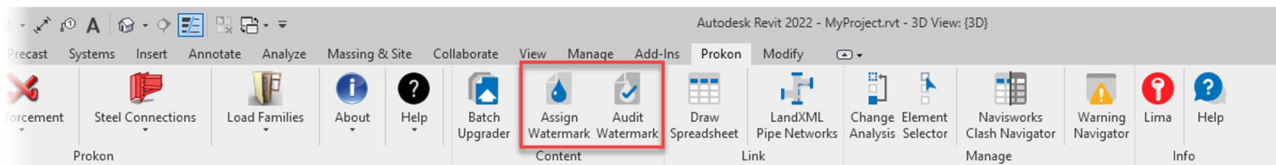

WATERMARK FOR REVIT  
MODELLING | D12

## Summary

Assign unremovable watermarks to **Revit**® content to help protect your intellectual property. The **Watermark** tool may be used at any time to audit **Revit** content and verify ownership.

## What makes this module special?

- Protect intellectual property
- Verify ownership

## Detailed Description

This add-in allows you to attach a watermark to project / family elements. Watermark data includes a logo, company name, website, date, and password.

Assign WaterMark

Company:

Website:

Password:

Image (100x100):

The add-in could also be used to audit existing **Watermark** data (if available) in the current project/family.

A matching password is required to overwrite existing element **Watermark** data – this prevents the removal of existing **Watermarks** without authorisation. Passwords may have any characters but should not exceed 30 characters in length.

A valid license is required to specify your own **Watermark** data. Without a license, the **Watermark** data is locked.
