

Centralized Remote Monitoring and Management by TeamViewer

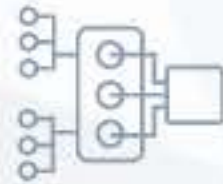

Manage, monitor, track, patch, and protect your computers, devices, and software – all from a single platform.

Remote Device Monitoring

Monitor critical aspects of your devices, receive alerts, and stay ahead of problems.

- ✔ Monitor disk space & health, CPU usage, processes, and more
- ✔ Remote Task Manager
- ✔ Supporting Windows, macOS, and Linux

Network Device Monitoring

Monitor the availability and issues of network devices such as routers, printers, and more.

- ✔ Automatic detection of network devices
- ✔ Increase uptime & productivity
- ✔ Instant alerts

NEW!

Patch Management

Detect vulnerabilities due to outdated software, and deploy patches remotely.

- ✔ Patch Windows and 3rd party applications
- ✔ Comprehensive and intuitive
- ✔ Automated & policy-driven

Asset Management

Gain visibility into your IT by tracking all your IT assets from a single dashboard.

- ✔ Your hard- and software in one central place
- ✔ Important device information at a glance
- ✔ Real-time information

Endpoint Protection

Protect your devices against viruses, trojans, ransomware, and more with a state of the art engine.

- ✔ VB100 certified protection
- ✔ Bitdefender engine
- ✔ Automatic updates – no maintenance required

Backup

Backup your important business data in the cloud and never lose data again.

- ✔ Uncapped bandwidth
- ✔ Cloud storage – available anywhere, anytime
- ✔ Highest security standards

Scalable

TeamViewer Remote Management grows with your business. Only pay for what you actually need and scale at any time.

Customizable

Tailor TeamViewer Remote Management to the varying needs of departments or clients by defining individual policies.

Integrated

No added vendor complexity, and everything in one convenient dashboard. Benefit from TeamViewer's integrated RMM solution.
